

Dr. Cara Website

Link Audit & Fix List for Web Designer

Client: Dr. Cara Alexander — Connected Leadership

Prepared: May 26, 2026

Scope: drcara.net (Squarespace) plus linked properties: groundid.net, groundid.com, delphi.ai/drcara

Pages crawled: 9 on drcara.net · **Unique URLs checked:** 31

Total items: 16 (4 Critical · 6 Important · 6 Housekeeping)

How to Use This Document

This is a designer worklist, not a content review. Each item is one concrete fix with the exact 'from → to' change. Work top-down — Critical first, then Important, then Housekeeping. When all four Critical fixes are live, the site's broken-link bleed stops.

The 'Where to find it' row in each item tells you which Squarespace page to open and where on the page to look. Check items off as you complete them.

CRITICAL — Broken or Wrong Destination

These are confirmed broken (HTTP 404) or sending traffic to the wrong place. Fix these first.

■ C1. Site nav 'Lead Free Now' link is broken on every page

Where to find it	Squarespace → Design → Site Header → Main Navigation
Element	Nav item labeled 'Lead Free Now'
Current	/drcara-lead-free-now → HTTP 404
Fix to	/lead-free-now (the real page; returns HTTP 200)
Why it matters	This is in the global nav, so every page on the site has a broken link in its header. Highest-impact fix.
Done when	Clicking 'Lead Free Now' in the nav from any page loads the real Lead Free Now page.

■ C2. 'Explore Ways to Work Together' button on /contact is broken

Where to find it	Squarespace → Pages → /contact → scroll to the 'Explore Ways to Work Together' button
Element	Button labeled 'Explore Ways to Work Together'
Current	/drcara-work-together → HTTP 404
Fix to	/work-together (the real page; returns HTTP 200)
Done when	Clicking the button on /contact loads the Work Together page.

■ C3. Homepage 'Take the Free Assessment' CTAs point to wrong tool

Where to find it	Squarespace → Pages → Home → two places: (a) the 'Five Tensions' section, (b) the 'Profile assessment' section
------------------	---

Element	Two buttons both labeled 'Take the Free Assessment →'
Current	Both link to delphi.ai/drcara/talk?q=... — that's the Virtual Mind chat tool , not the assessment
Fix to	https://groundid.net (the Leadership Origin Profile quiz)
Why it matters	The label says 'Assessment' but the link goes to a chat. Visitors land on the wrong tool. /lead-free-now and /framework already do this correctly — the homepage is the outlier.
Done when	Both homepage 'Take the Free Assessment' buttons land on https://groundid.net .

■ C4. Homepage Virtual Mind CTA uses an outdated Delphi URL

Where to find it	Squarespace → Pages → Home → hero section → 'Virtual Mind — Try It Free, No Email' CTA
Element	'Virtual Mind — Try It Free' button
Current	delphi.ai/drcara/talk?q=What+should+I+do+next — Delphi renamed /talk to /chat and currently 301-redirects
Fix to	delphi.ai/drcara/chat?q=What+should+I+do+next
Why it matters	Works today because of Delphi's redirect, but redirects can be removed any time. Update now to remove the dependency.
Done when	The CTA URL contains /chat directly, no redirect involved.

IMPORTANT — Works, but Needs Cleanup

These don't 404, but they're confusing, inconsistent, or unverified.

■ I1. RPR Coffee launch date contradicts itself

Where to find it	Two locations: (a) Homepage RPR Coffee section, (b) groundid.net/coffee landing page
Issue	Homepage says 'Coming July 2026 '. The /coffee page says June 2026 for the same product.
Action	Decide which month is correct, then update whichever page is wrong. Both must agree.
Done when	Both pages show the same launch month for RPR Coffee.

■ I2. Footer has two distinct labels pointing to the same URL

Where to find it	Footer (visible on every page) — 'Coaching Disclaimer' and 'Professional Services Disclaimer' stacked on top of each other
Issue	Both links go to /coaching-disclaimer. Two different labels, one destination.
Action	Either (a) create a real /professional-services-disclaimer page with separate content, or (b) remove the duplicate footer link.
Done when	Each visible footer link goes to its own unique page.

■ I3. 'Login Account' nav item is a dead link

Where to find it	Site nav (visible on every page)
Issue	Nav item 'Login Account' has <code>href="#"</code> — clicking it does nothing
Action	Either (a) wire it to the Squarespace member-area login URL if member accounts are intended, or (b) remove the nav item entirely.
Done when	Clicking 'Login Account' either logs the user in or the item is gone.

■ I4. 'Take the Free Assessment' label is split across two destinations site-wide

Where to find it	Every page that uses this anchor text
Issue	Sometimes 'Take the Free Assessment' goes to groundid.net (correct), sometimes to Delphi (wrong — see C3)
Action	Standardize anchor text → destination mapping site-wide: • 'Take the Free Assessment' = always → groundid.net • 'Try the Virtual Mind' = always → delphi.ai/drcara/chat Audit every page and unify.
Done when	Each label points to exactly one destination across the entire site.

■ I5. 'Take the Assessment | Contact Dr. Cara' link is half-dead on /work-together

Where to find it	Squarespace → Pages → /work-together
Element	A single link reading 'Take the Assessment Contact Dr. Cara'
Issue	The whole label is one link going only to /contact. The 'Take the Assessment' half of the label points nowhere — it's just text.

Action	Split into two separate links: 'Take the Assessment' → https://groundid.net , 'Contact Dr. Cara' → /contact . Or drop the unused half.
Done when	Each labeled action is clickable and goes to its own destination.

■ I6. Checkout cart CTAs need manual verification

Where to find it	Homepage and /work-together — three CTAs: 'Start Free →', 'Claim a Founding Seat →', 'Apply Now →'
Issue	All three URLs return HTTP 200, but Squarespace renders cart contents in the browser. Audit could not verify the right product loads at the right price. Cart tokens silently invalidate when products are edited or deleted.
Action	Click each CTA in an incognito window. Confirm: (a) the cart opens, (b) the right product is in it, (c) the price is correct. Pay special attention to 'Claim a Founding Seat' — limited-time pricing is most likely to drift.
Done when	All three carts open with the correct product and price.

HOUSEKEEPING — Nice to Clean Up

Not bugs. Worth knowing about, and quietly fixing if there's time.

■ H1. Add a redirect for /drcarahome (no '-1')

The homepage's canonical URL is /drcarahome-1. Someone typing /drcarahome (without the -1) gets a 404. No active link points there today, but it's a typo trap. Add a Squarespace URL redirect: /drcarahome → /.

✓ H2. Mailto address uses double-a (drcaraa.com) — verified working

The 'Email to Discuss' CTA on /contact and the RPR Coffee waitlist CTA both use drcara@drcaraa.com. The double-a is **intentional** (matches Instagram dr.caraa, LinkedIn drcaraa) and verified working via Google Workspace MX records. **No action** — just document so a future editor doesn't 'correct' it to a single-a address that doesn't exist.

✓ H3. The typo domain groundid.com is a working mirror — keep it renewed

groundid.com (single-d) is a byte-for-byte mirror of groundid.net on Vercel. It catches real typo traffic. **No action** needed, but make sure this domain stays renewed at the registrar — losing it would drop the typo safety net.

✓ H4. LinkedIn footer link blocks audit probes (not actually broken)

The LinkedIn icon in the footer returns HTTP 405 to automated checks. This is LinkedIn rate-limiting, not a broken link — the profile loads in a browser. **No action** needed.

■ H5. Quiz-result archetype pages need a per-profile spot-check

The Leadership Origin Profile quiz on groundid.net routes the user to a profile-specific landing page (Architect / Carrier / Performer / Sentinel) after they submit. The link is generated in JavaScript at runtime, so it can't be checked from outside the live quiz. Recommend taking the quiz four times (or temporarily forcing each result in dev tools) to confirm all four archetype landing pages load correctly.

✓ H6. The /cart page is reachable but not in the main nav

/cart is reachable via the cart icon in the header. It's not orphaned — just worth noting that it doesn't show up in the main nav, which is correct Squarespace behavior. **No action**.

What We Could Not Verify Automatically

Three items needed a real browser session and weren't testable from outside. A human pass on these closes out the audit.

1. **Cart contents and prices** behind the three checkout CTAs (Squarespace renders these client-side).
 2. **Each archetype's landing page** at the end of the GroundID quiz (JavaScript-routed).
 3. **The 'Login Account' intent** — whether it should be wired up or removed (a UX call, not a link-health call).
-

Quick Reference — Anchor Text to URL Map

When in doubt during any fix, cross-check the destination against this table.

Anchor text	Should always point to
Take the Free Assessment	https://groundid.net
Try the Virtual Mind / Talk to the Virtual Mind	https://www.delphi.ai/drcara/chat
Lead Free Now	/lead-free-now
Work Together / Explore Ways to Work Together	/work-together
Contact Dr. Cara / Contact	/contact
The Framework	/framework
About	/about
Coffee / RPR Coffee	https://groundid.net/coffee

Sign-off

When all Critical and Important items are done, please reply to Dr. Cara with:

- A list of the items completed (by ID — C1, C2, etc.)
- Any items you couldn't complete and why
- Date and time the changes went live

A re-audit will be run shortly after to confirm.
